Plan for possible H_2O decline

So, no impact of drought has been measurable, YET! Water at Big Springs has been age-tested at approx. 50 yrs. What happens in 50 years, (if not sooner, of course) if water supply is not sufficiently recharged due to drought or if there is a redirection +/or drainage of underground reservoirs due to seismic activity? What action is Crystal Geyser prepared to take in the event of decreasing H_2O supplies? Can the City get that as a written contract?
